Subject: Amarillo sampling
Date: Tuesday, January 24, 2017 4:30:00 PM

Had a conversation with Heidi (TDSHS), Shaun May (City Manager) and Dr. Milton today. **They DO want to move forward** with the best option we seem to have for sampling. I assume this is still the OSHA method. This should provide another layer of evidence/security that the gas is gone. They would like to know roughly when we can/will start. Do we have a lab lined up? Do we have the necessary tubes, or how long does it take to get them etc?
